

For Immediate Release: 26 September 2007

The Crinia AC-100 Audio Conference System wins Best RF Design and Best Overall Project at the EDN Innovation Awards

The Crinia AC-100 was the star of the EDN Innovation Awards held in Sydney on 25 September 2007. The AC-100 was the winner of the **Best Application of RF Design** and it was also awarded the top award of the night, **Best Overall Project**.

The competition for the EDN Innovation Awards was of outstanding quality with entries from consortiums that included large corporations, Australia's best universities and government agencies, some of them with multi billion dollar projects. After the three awards that Crinia has already won the USA, this is another public and well-deserved recognition of the incredible talent of the Crinia engineering and design team.

The vast array of technologies used in the Crinia AC-100 and the innovative ways in which these technologies are deployed were certainly a major factor in the judges' decision. But what is also important is the vindication of Crinia's overall philosophy of uncompromising engineering and design excellence and our refusal to give in to the relentless cheapening of products and services and built in obsolescence.

The Crinia AC-100 iconic status just keeps on growing.
